New antisense oligonucleotides targeted to nucleic acids encoding inhibitor-kappa B-R, useful for diagnosing or treating diseases associated with expression of inhibitor-kappa B-R, e.g., a heightened immune response or infection.
                                                                                                                                                     Claim 3; Page 75; 108pp; English.
                                                                                                                                                                                                                  WPI; 2003-468635/44.
```

for treating diseases or conditions associated with the expression of inhibitor-kappa B-R such as a heightened immune response involving increased cytokine expression, or a result of infection (e.g. bacterial, viral or parasitic). They are useful for diagnostics, therapeutics, prophylaxis e.g. to prevent or delay infection, inflammation or tumour formation, as research reagents and kits and in distinguishing between functions of various members of a biological pathway. They are also useful in antisense therapy. The present sequence is an oligonucleotide targetted to human inhibitor-kappa B-R DNA The invention relates to antisense compounds targetted to a nucleic act molecule encoding human inhibitor-kappa B-R (also known as I-kappaBR, IKBR, I-kappa-B-related, ikappab r, nuclear factor of kappa light polypeptides gene enhancer in B-cells inhibitor-like 2 and NFKBIL2) to inhibit its expression. Antisense compounds of the invention are useful acid

Sequence 20 BP; 3 A; 7 C; 6 G; 4 T; 0 U; 0 Other;

Cargill M, Ireland JS, Lander ES

WPI; 2001-367705/38

New nucleic acid segments of the human genome, particularly from genes including polymorphic sites, for phenotype correlation, forensics, paternity testing, medicine and genetic analysis.

Claim 1;

Page 42;

80pp;

English.

contain single nucleotide polymorphisms (SNPs). A method is included in the invention for analysing a nucleic acid sample, which consists of determining the base occupying any one of the polymorphic sites given in the SNP containing sequences. The nucleotide sequences can be used in the diagnosis or monitoring of diseases, such as cancer, inflammation, heart diseases, diseases of the cardiovascular system, and infection by microorganisms. The oligonucleotides are also useful in the manufacture of a medicament for the treatment or prophylaxis of the diseases, and as a pharmaceutical. SNP containing oligonucleotides are useful in a applications such as phenotype correlation, forensics, paternity testing, medicine and genetic analysis

                                                            This oligonucleotide represents a dimer sequence of the upTAR was used as a competitor oligonucleotide in a gel shift assay binding of PUR protein to DNA. The PUR sequence can be used to chemical or biological compounds that bind to PUR or binding f PUR. Inhibitors of PUR activity may be used to treat hyperprol

                                                                                                                                                                                               This is the nucleotide sequence of a purine-rich oligonucleotide used a competitor with the PUR element in the method of the invention, involving the use of the PUR protein and its fragments, which inhibit protein binding to PUR element or other proteins. Inhibitors of PUR activity may be useful for treating viral infections and hyperproliferative diseases such as cancer

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       binds to an epitope of the PUR protein. Antibodies that bind to the PUR protein and neutralise PUR activity may be used to treat hyperproliferative diseases such as cancer. PUR antibodies may be used diagnostically to detect aberrant expression of the PUR protein and/or mutations in the PUR gene. The present sequence represents an upTAR element oligonucleotide purine-rich probe, which is used in an example
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AAZ99647

                                                                                                          conjugation. The specification describes compositions comprising G-motif coligonucleotides. The G-motif oligonucleotides inhibit activation of antigen presenting cells by inhibiting the uptake of DNA by a cell, by stimulating natural killer cells, or by co-stimulating cytotoxic T-clymphocytes. The G-motif oligonuclectides may be used for the productions of vaccines for treating septic shock, inflammation, autoimmune diseases (e.g. rheumatoid arthritis, Crohn's disease, sarcoidosis, multiple collection), helper T cell response 1-mediated disease and transplant crejection), helper T cell response 1-mediated diseases (e.g. Streptococcal induced arthritis, Lyme arthritis, chronic inflammatory complaints, and insulin-dependent disease (e.g. Compalations, parasitic infections (e.g. Leishmaniasis or Toxoplasmosis), wire lifections, parasitic infections (e.g. Leishmaniasis or Toxoplasmosis), crifections, spontaneous abortions and human immunodeficiency virus confiduce proliferation of bone marrow cells, especially macrophage confidences cells

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Synthetic flanking sequences (see AAQ55601) were used to illustrate the novel method; a direct repeat of a specific cloned region of DNA which lies between the flanking sequences can be constructed using primers having the sequences in AAQ55602-Q55605
                                           The human and murine osteogenic protein-1 (OP-1) non-coding sequences can be used in the construction of expression vectors comprising a reporter gene which has the non-coding sequence lying contiguous to the reporter gene, the non-coding sequence being able to act on and affect expression of the reporter gene when bound to by candidate compounds. The method is used to identify compounds capable of modulating OP-1 expression. The vector may optionally comprise a second non-coding sequence and the non-coding sequence(s) used define at least one, preferably 1-6, WT1/EGR binding elements, at least one FTZ (Fushi-Tarazu) binding element or a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Disclosure;

                                     CC the expression of osteogenic protein-1 (OP-1) uses a cell transfected with a nucleic acid sequence comprising a reporter gene and an upstream concording sequence from OP-1 (OP-1) is a tissue morphogenic protein. The method is useful for screening compounds capable of stimulating or cinhibiting transcription and/or translation of the OP-1 gene, as well as compounds which may be used as therapeutics for in vivo and ex vivo correcting and alleviating a diseased condition or to regenerate lost or correcting and alleviating a diseased condition or to regenerate lost or che differentiated phenotype of cells in culture. Morphogen expression inhibiting compounds may also be used to maintain viability of the differentiated phenotype of cells in culture. Morphogen expression cinhibiting compounds identified by the new method can be used to modulate the degree and/or timing of morphogen concentration. Compounds which upcregulate levels of circulating OP-1 in vivo can be used to correct bone metabolism diseases such as osteogorosis. This sequence contained in the cupstream region of the osteogenic protein-1 (OP-1) gene. The DNA binding proteins Wt-1 and Egr-1 bind to and control transcription of DNA binding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Best Local Similarity 95.0 Matches 19; Conservative

                                                                                                                                                                                   The invention relates to a replicase complex comprising a hepatitis C C virus (HCV) NS5B replicase protein, a linear nucleic acid template and a CC complementary nucleic acid primer which is annealed to the 3, terminus of CC the template, where the template is at least three nucleotides and the complex is two or three nucleotides, and the template and primer do not form a stable duplex in solution in the absence of the HCV NS5B protein. The complex is useful for detecting HCV replicase activity and permits cestablishment of sensitive RNA-dependent RNA polymerase assays to screen and evaluate antiviral inhibitors and to improve the specificity and CC of a reliable system for determining kinetic and thermodynamic constants of HCV NS5B-catalysed nucleotide incorporation and investigation of CC specifically, the short RNA template and primer pairs are useful in Screening assays which are used for determining kinetic, thermodynamic and mechanistic properties of NS5B replication and ultimately in the CC development of inhibitors of NS5B replicase activity may be used for developing anti-HCV pharmaccuticals. Sequences ABK99271-ABK99296 represent HCV NS5B replicase RNA synthesis

                                                          for an HLA locus, together with a second primer making up a locus-
specific primer (LSP) pair. The primers pref. define a DNA sequence that
contains all exons that encode allelic variability associated with the
HLA locus together with at least one of the adjacent intron sequences.
For Class II loci the variable exon is the second exon. The primers are
pref. located so that a substantial portion of the amplified sequence
corresponds to intron sequences. Direct deter- mination of the haplotype
is possible, providing useful information for identity of individuals for
e.g. paternity case and forensic investigations. See also AAQ10621-
Q10669. (Updated on 25-MAR-2003 to correct PA field.)

                                                                                                                                                                                                                                                                                                                                                                                       The present invention describes the use of mitotic check point genes (MCPGs) in the diagnosis and treatment of cell proliferative disorders. A method has been developed for diagnosing a cell proliferative disorder in a subject associated with a MCPG, by determining the presence of a mutant MCPG in the sample where the presence of a mutant MCPG in the sample where the presence of a mutant MCPG in the sample is indicative of a cell proliferative disorder. The method can be used for diagnosing a cell proliferative disorder such as a neoplasm, e.g. breast or colorectal neoplasm. It can also be used for treating a cell proliferative disorder, benign hyperplasia or neoplasia, particularly colon or breast cancer. It can also be used for treating disorder associated with insufficient cell proliferation or undesirable cell degeneration. The present sequence represents a PCR primer used to amplify human BUBRI, in an example from the present invention. Loss of a MCPG is associated with the mutational inactivation

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention describes an antisense compound (I) up to 30 nucleobases in length, where (I) inhibits expression of daxx (also known as Fas binding protein, CRP-C binding protein, daps for death associated protein 6 and EAP for Ets-1 associated protein). (I) has cytostatic and antiinflammatory activity, and can be used in antisense therapy and as a modulator of daxx. (I) is useful for inhibiting the expression of daxx in cells or tissues in vitro. (I) can be utilised for diagnostics, therappeutics for the treatment of diseases associated with the expression of daxx, prophylaxis e.g. to prevent or delay infection, inflammation or tumour formation and as research reagent. The present sequence represents an inhibitory human daxx antisense phosphorothicate oligonucleotide which is used in the avantisense phosphorothicate oligonucleotide which

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ribosomes in the nucleolus via a ribonucleoprotein consensus sequence. However, it has also been shown to be involved in cytokinesis, nucleogenesis, cell proliferation and growth, transcriptional repression, replication, signal transduction, and chromatin decondensation. Nucleolin is a member of the Ag-NOR (active ribosomal gene located in the nucleolar organiser region) family of proteins which are markers of active ribosomal genes, and whose expression is associated with the prediction of tumour growth rate. The presence of antibodies against nucleolin are associated with systemic connective tissue diseases such as systemic lupus erythematosus (SIB) and scleroderma-like chronic graft versus host disease. The oligonucleotides of the invention are useful for diagnosis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              oligonucleotides were designed to target different regions of the human nucleolin mRNA, and were analysed for their effect on nucleolin mRNA levels by quantitative real-time PCR. Nucleolin (also known as P92 or C23) is the most abundant nucleolar phosphoprotein in actively growing cells. Nucleolin primarily participates in ribosome biogenesis and transport of ribosomal components, being able to transiently bind to pre-

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to novel methods for constructing fungal strains useful for identification and validation of gene products as targets for therapeutic agents, for creating a collection of identified essential genes, and screening assays for the discovery of new drugs. The invention provides the GRACE (gene replacement and conditional expression) method for the construction of mutant organisms referred to as GRACE strains of the organism. The invention can be applied to any organism, particularly a pathogenic fungus e.g. Candida albicans, Asparallus funigatus and Cryptococcus neoformans. The methods are useful to identify agents that may be used in the treatment of fungal infections. AAS23687-AAS23747 represent primers A #1-61 used as probes

(M1) is useful for constructing a strain of diploid fungal collis in which both alleles of a gene are modified. The diploid fungal collis in which both alleles modified are useful for identifying a gene that contributes to the virulence and/or pathogenicity of a fungus, a gene that contributes to the virulence and/or pathogenicity of a fungus, a gene that contributes to the resistance of a diploid fungus to an antifungal agent that inhibits the growth of a fungus a gene that contributes to the resistance of a diploid fungus to an antifungus agent that inhibits the growth of a fungus to an antifungus of a gene product, product, product, proferably enzymatic activity of a gene product, preferably enzymatic activity. The method is useful for identifying a compound having the activity. The method is useful for identifying a compound having the catholity. The method is useful for identifying a compound having the activity. The method is useful for identifying a compound having the activity. The method is useful for identifying a compound having the activity. The method is useful for identifying a compound having the catholity. The method is useful for identifying a compound having the activity. The method is useful for identifying a compound having the catholity. The method of the invention. Note: The sequence data for treating infection by C. albicans. The present sequence data for this patent is not represented in the printed specification but is based or sequence information supplied to Derwent by the Buropean Patent Office
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention comprises a method for detecting a target nucleic acid molecule in a plurality of templates, the method involves combining a detection probe, a first oligonucleotide, second oligonucleotide, a primer and a plurality of templates suspected of containing the target nucleic acid molecule. The method of the invention is useful for detecting the presence of a target nucleic acid molecule in a plurality of templates. The method is also useful for quantitating a particular nucleic acid molecule in a sample. The invention provides a rapid, reliable and cost-effective method for detecting a particular nucleic acid molecule in a sample. The present DNA sequence represents a universal sequence that was used in an example of the invention.

Novel antisense compound which inhibits expression for treating disease or condition associated with e and as research reagents, kits and diagnostics. n of human nck-2 useful expression of nck-2,

Claim 1; Col 41-42; 38pp; English.

Sequences AAC92649-C92728 represent antisense oligonucleotides targetted to the human Nck-2 gene, which inhibit its expression. The antisense oligonucleotides were designed to target different regions of the human Nck-2 mRNA, and were analysed for their effect on Nck-2 mRNA levels by quantitative real-time PCR. Nck-2 (also known as Nck adapter protein, hNck-beta and Grb4), contains both SH2 and SH3 src homology domains and functions as an adapter protein in integrin-mediated and receptor tyrosine kinase-mediated signal transduction, particularly in growth factor receptor signalling Moreover, Nck-2 participates in pathways that connect growth factor receptor signalling moreover, Nck-2 participates in pathways that that a its

                          The invention relates to a novel pharmaceutical composition, which has first active agent comprising an oligonucleotide antisense to the initiation codon, coding region, 5' or 3' end genomic flanking regions, 5' and 3' intron-exon junctions, or regions within 2-10 nucleotides of junctions of genes encoding a polypeptide associated with lung and/or nasal airway dysfunction and a second active agent comprising an antiinflammatory steroid and ubiquinone. A composition of the invention has antiinflammatory, antiallergic, antiasthmatic, hypotensive, immunosuppressive, and cytostatic activity. The composition may have a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human; antisense; lung dysfunction; nasal airway dysfunction; antiinflammatory steroid; ubiquinone; antiinflammatory; antiallergic; antiasthmatic; bypotensive; immunosuppressive; cytostatic; gene therapy; antisense gene therapy; respiratory; lung; adenosine sensitivity; antisense receptor; bronchodilation; bronchoconstriction; lung allergy;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              interaction with PINCH, a LIM domain-containing adapter protein which is involved in integrin, growth factor and Wht signalling pathways. Nck-2 also interacts with EGF (epidermal growth factor) and PDGF (plateletderived growth factor) receptors, inhibiting EGF- and PDGF-stimulated DNA synthesis in an SH2-dependent manner. Nck-2 is also able to interact with v-Abl, Ras and Sos proteins to induce transcriptional activation, and is therefore implicated in the development of cancer, particularly leukaemia and breast cancer. The oligonucleotides of the invention are useful for diagnosis, prevention and treatment of conditions associated with Nck-2 expression.
                                                                                                                                                                                                                                                                                                                                                                                                                               Pharmaceutical composition for treating ailments associated with impaired respiration, has oligo(s) antisense to specific gene(s) or its corresponding RNAs, and glucocorticoid or non-glucocorticoid steroid or
                                                                                                                                                                                                                                                                                                                                            Claim 15;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Miller
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  24-APR-2001; 2001US-0286137P
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              23-APR-2002; 2002WO-US013135

                                                                                                                  The present invention relates to coding sequences (ADC49210 and for rabbit hyaliuronic acid synthetase (HAS)-2 or HAS-3 (ADC4921 ADC49213). The sequences of the invention can be used for treat joint disorders and articular diseases, such as osteoarthritis. present sequence was used to illustrate the invention.
                                                                                                                                                                                                                    acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              preventing a respiratory, lung or malignant disease or condition, also for enhancing the prophylactic or therapeutic respiratory effect of an antinflammatory steroid in a subject, for reducing or depleting levels of, or reducing sensitivity to adenosine, reducing levels of adenosine receptor, producing bronchodilation, increasing levels of ubiquinone or lung surfactant in a subject's tissue, or treating bronchoconstriction, lung inflammation, lung allergies, or a respiratory disease or condition. Note: The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format directly from WIPO at fire, wipo.int/pub/published_pct_sequences

                                                                                                                                                                                                                                                                                                               This is the nucleotide sequence of primer Exon 2n, which was used with primer Exon 1 (see AAV64912) in RT-PCR to characterise the splice junctions of the latency associated transcript (LAT) of herpes simplex virus type 1 (see AAV64883-86). The invention relates to methods of stabilising unstable gene transcripts. A claimed polynucleotide comprises: a polynucleotide encoding a gene product; a 5'-sequence of an intron, including the splice donor and splice acceptor sites (see AAV64885-86), and a 3'-sequence of the same intron, including a hairpin structure (see AAV64887) next to the intron's branchpoint. A preferred intron is the 2.0 kb LAT of a herpes virus. Methods and compositions using the polynucleotide can be used in gene therapy and more generally as research reagents, markers of gene production, in therapeutic or diagnostic compositions, in drug screening and to identify transcripts produced only at selected stages of the cell cycle
                         RT-PCR primer used to amplify CHYM cDNA.

Expression of MUC4 can therefore be used as an indication of pancreatic cancer. The specification describes a method for detecting a MUC4-encoding nucleic acid or a MUC4 protein in a biological sample as a tumour marker for pancreatic cancer. The method comprises contacting a nucleic acid extracted from the sample with oligonucleotide primers that specifically hybridise to the MUC4 nucleic acid; or contacting a biological sample with an antibody (or its fragment) that has specific binding affinity for MUC4. The method is useful for diagnosing pancreatic cancer or pancreatic adenocarcinoma, particularly for early detection of pancreatic cancer
                                                                                                                                                                                                                                                                                                                                          Human; casein kinase 2-alpha prime; diabetes mellitus; hyperproliferative disorder; breast cancer; prostate cancer; liver cancer; inflammation; tumour formation; cytantidiabetic; antiinflammatory; antimicrobial; phosphorothio

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to antisense oligonucleotides and methods for modulating the expression of human or mouse casein kinase 2-alpha prime. The antisense oligonucleotides are useful for inhibiting the expression of casein kinase 2-alpha prime, and for treating diseases or conditions associated with aberrant expression of casein kinase 2-alpha prime. Such diseases include diabetes mellitus, and hyperproliferative disorders (particularly cancers e.g. breast cancer, prostate cancer, or liver cancer). The antisense compounds are also useful for diagnostics, inflammation or tumour formation, as research reagents and kits, and in distinguishing between functions of various members of a biological pathway. ABS67840-ABS67917 represent human or mouse casein kinase 2-alpha prime antisense oligonucleotides which comprise a phosphorothicate
                                                                                                                          31-MAY-2001;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               2545/c
ABT32545
                                                The invention comprises nucleic acids that show increased expression in human neuroblastomas with poor prognosis over those with a good prognosis. The nucleic acids of the invention are useful as a tool for distinguishing neuroblastomas with a favourable prognosis (spontaneous regression) from neuroblastomas with a poor prognosis (high malignancy) The DNA sequences ABT32224 - ABT32571 represent oligonucleotides used in an example of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               human neuroblastoma with good prognosis, prognosis of neuroblastoma and providing
                                                                                                                                                                                                                                                                          Example
                                                                                                                                                                                                                                                                                                                        Nucleic acids having higher expression prognosis for diagnostic prediction of
                                                                                                                                                                                                                                                                                                                                                                                                           WPI; 2003-140476/13.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  (CHIB-)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention comprises DNA sequences that show enhanced expression in human neuroblastoma with good prognosis. The bNA sequences of the invention are useful in clarifying good/poor prognosis of neuroblastoma. The present DNA sequence was used in the exemplification of the inventic

                                                                                                                                        The present invention relates to novel antisense oligonucleotides (ABZ81522-ABZ81593) which are targeted to human protein kinase A (PKA) regulatory subunit RII beta nucleotide sequence (ABZ8113), and which specifically hybridise with and inhibit the expression of the PKA regulatory subunit RII beta (PKA is also known as CAMF-dependent protein kinase). The antisense oligonucleotides are useful for modulating the expression of PKA regulatory subunit RII beta and for treating diseases or conditions associated with aberrant expression of PKA regulatory subunit RII beta, e.g. diabetes or cancer. The antisense compounds are also useful for diagnostics, therapeutics, prophylaxis, e.g. to prevent or delay infection, inflammation or tumour formation, as research reagents and kits, and in distinguishing between functions of various members of a biological pathway
                                                                                                                                                                                                                                                                                                                                                Claim
                                                                                                                  Seguence
                                                                                                                                                                                                                                                                                                                                                                        New antisense oligonucleotides targeted to nucleic acid encoding protein kinase A regulatory subunit RII beta, useful in treating diseases e.g. cancer associated with the aberrant expression of the protein kinase.

(I) has cytostatic and antiinflammatory activity, and can be used in antisense therapy and as a modulator of daxx. (I) is useful for inhibiting the expression of daxx in cells or tissues in vitro. (I) can be utilised for diagnostics, therapeutice for the treatment of diseases associated with the expression of daxx, prophylaxis e.g. to prevent or delay infection, inflammation or tumour formation and as research reagent. The present sequence represents an inhibitory human daxx antisense phosphorothioate oligonucleotide which

                                                                                                                                                                                                                                                                                                                                                                                                                                                                     RESULT 82
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention describes a compound (I) 8-50 nucleobases in length CC targeted to a nucleic acid molecule (II) encoding RAIDD which is an adaptor molecule containing both death domain (DD) and caspase recruitment domains (CARD), where (I) specifically hybridises with and inhibits expression of RAIDD, or specifically hybridises with and 8-nucleobase portion of an active site on (II). (I) is useful for conhibiting the expression of RAIDD (Receptor interacting protein (RIP) associated ICH-1/CED-3-homologous protein with death domain) in cells or tissues, and for treating an animal having a disease or condition associated with RAIDD, where the disease or condition is a hyperproliferative disorder such as conditions of growth or metabolic disorder. (I) is also useful for diagnostics, therapeutics, prophylaxis, as research reagents and kits, for distinguishing functions of various members of a biological pathway, and in antisense gene therapy. (I) is also useful prophylactically, e.g. to prevent or delay infection, inflammation or tumour formation. This sequence represents a mouse RAIDD cantisense oligonucleotide used to control expression of the RAIDD protein
                                                                                                                                                                                                                                                                                                                                                                                               Query Match

The invention describes a compound (I) 8-50 nucleobases in length CC targeted to a nucleic acid molecule (II) encoding RAIDD which is an CC adaptor molecule containing both death domain (DD) and caspase contributed to an active site of (I) specifically hybridises with and CC inhibits expression of RAIDD, or specifically hybridises with at least an CC 8-nucleobase portion of an active site on (II), (I) is useful for CC inhibiting the expression of RAIDD (Receptor interacting protein (RIP) CC associated ICH-1/CED-3-homologous protein with death domain) in cells or tissues, and for treating an animal having a disease or condition CC theorems, (I) is also useful for diagnostics, therapeutics, prophylaxis, as research reagents and kits, for distinguishing functions of various members of a biological pathway, and in antisense gene therapy. (I) is also useful prophylaxis, and in antisense gene therapy. (I) is also useful prophylaxis, and in antisense gene therapy. (I) is also useful prophylaxis, and in antisense gene therapy. (I) is also useful prophylaxis, and in antisense gene therapy. (I) is also useful prophylaxis, and in antisense gene therapy. (I) is also useful prophylaxis, and in sequence represents a mouse RAIDD continuous of the CC antisense oligonucleotide used to control expression of the RAIDD protein

The DNA to be detected is amplified using PCR and then these probes which are pref. labeled using 32-P gamma-ATP are used to detect the mutant sequences. The primers and probes given in AAQ92098-219 are used in the method of the invention for detecting mammalian target DNA in sputum samples. Analysis of the target DNA is used to diagnose benign or malignant neoplasms of the lung. It is also useful for screening people at high risk or for monitoring progress of treatment of lung neoplasms. The method is based on the discovery that mutant target DNA associated with lung cancer is present at detectable levels in sputum. Cells shed into sputum from head and neck cancers may also be detected
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Detecting

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to enzymatic and antisense nucleic acid molecules that act as inhibitors of the expression of repressor genes encoding the TR2 Orphan receptor, EAR3/COUP-TF-1, the GATA transcription factor gene, IRF-2 and/or the CAATT Displacement protein (CDP). Inhibition of the repressors removes prevents inhibition (and consequently increases expression of) genes involved in the production of erythropoietin, granulocyte colony stimulating factor protein and interest the production of the production of genes involved in the production of erythropoietin, granulocyte colony stimulating factor protein and
                                                                                               Nucleic acid molecules, e.g., enzymatic nucleic constructs, which down regulate expression of a growth inhibitor gene useful for treating, e.g.,
                                                                                                                                                                                                                                                                                                                                                                                                                                                            11-FEB-2000; 2000US-0181797P.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CC expression of a CD20 gene and a nucleic acid molecule which down regulates corporates in of a CD20 gene and a nucleic acid molecule which down considers and the control of a neurite growth inhibitor gene (NGGO). The condition gene (NGGO) are considered acid selection of a neurite growth inhibitor gene (NGGO). The condition and pression of a neurite growth inhibitor gene (NGGO). The condition and condition acids (e.g. a riboxyme or a condition and condition are condition associated with a NMN motif) process an amberzyme (cleaving RNA with an NGN triplet), a zinzyme (cleaving RNA with a nGO) triplet acid may be contacted with a cell to reduce CD20 activity of the cell and treat a patient may further comprise the use of one or more conclusions (MCI), immunocycoma (IMC), small B-cell lymphocytic lymphoma, lukly low-grade or follicular NHL, lymphocytic cleaves and inflammatory arthropathy. The NGO gene in the conclust a patient having a condition associated NHL, mantle-cell conclusions and treat a patient having a condition associated with the level of the nucleic acid may be used to cleave RNA of the NGO activity of the cell and treat a patient having a condition associated with the level of treat central new further comprise the use of one or more cell and treat a patient having a condition associated with the level of treat central patient having a condition associated with the level of cleave condition and treat a patient selection of necessary at the nucleic acid may be used to create cell and treat a patient selection of necessary at a manual patient selection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

The present invention describes a human genome-derived myosin-like CC protein 1 (hGDMLP-1). The protein and polynuclectide sequences of hGDMLP-CC 1 can be used in gene therapy and vaccine production. The hGDMLP-1 CC mucleic acids can be used as probes to detect, characterise and quantify CC hGDMLP-1 nucleic acids in samples, as amplification substrates, to provide initial substrates for the recombinant engineering of hGDMLP-1 CC protein variants having desired phenotypic improvements, and for CC expressing the proteins. The hGDMLP-1 proteins or polypeptides may be used as immunogens to raise antibodies that specifically recognise hGDMLP-1 (c) proteins, as standards in assays used to determine the concentration and/or amount specifically of hGDMLP proteins, as specific biomolecule capture probes for surface-enhanced laser desorption ionisation, as therapy and for surface-enhanced laser desorption ionisation, as the propential sequence sencoding hGDMLP-1 may be used for diagnosing a CC objunction, and in vaccines or for replacement therapy. The polynucleotide sequences encoding hGDMLP-1 may be used for diagnosing a CC objunction and in vaccines of the present therapy. The propens to sequence represents an oligomer used for diagnosing of the present sequence in the expression of hGDMLP-1 in particular heart CC in proteins, but was obtained in electronic format directly from WIPO as the printed of the printed on the present invention.                                                                                                                                                                                                                                                                                                                    CC The present invention describes a human genome-derived myosin-like CC protein 1 (hGDMLP-1). The protein and polynucleotide sequences of hGDMLP-CC 1 can be used in gene therapy and vaccine production. The hGDMLP-1 CC nucleic acids can be used as probes to detect, characterise and quantify CC hGDMLP-1 nucleic acids in samples, as amplification substrates, to provide initial substrates for the recombinant engineering of hGDMLP-1 CC protein variants having desired phenotypic improvements, and for CC expressing the proteins. The hGDMLP-1 proteins or polypeptides may be used as immunogens to raise antibodies that specifically recognize hGDMLP cc used as immunogens to raise antibodies that specific biomolecule cc proteins, as standards in assays used to determine the concentration cc and/or amount specifically of hGDMLP proteins, as specific biomolecule capture probes for surface-enhanced laser desorption ionisation, as therape training the protein, and in vaccines or for replacement therapy. The production, and in vaccines or for replacement therapy. The polymucleotide sequences encoding hGDMLP-1 may be used for diagnosing a cdisorder associated with the expression of hGDMLP-1, in particular heart cc and skeletal muscle disorders. hGDMLP-1 is localised to chromosome 22.

CC The present sequence represents an oligomer used in the screening of the present sequence data for this patent did not form part of the printed capture with mile and not form part of the printed controlled and the printed on the protein directly from WIPO at the wipo int/ml/humilised for the present directly from WIPO at the purpose.

HTPL CABB Potents, with a few single base pair differences between the two. One of the single base pair changes introduces a premature stop CC codon in HTPL-S (S for short) compared to HTPL-I (L for long). HTPL CS shares an overall structure organisation with the Patched protein. The start of that of Patched, and is a potential tumour suppressor. HTPL is important in regulating male germ cell development, and the HTPL gene was CC mapped to human chromosome 10p12.1. HTPL and its coding sequence are cuseful for diagnosing a disorder caused by mutation in HTPL, and in CC therapy and manufacture of a medicament for treatment or prevention of such disorder associated with decreased expression or activity of human CHTPL. Such disorders include disorders of testis, or adrenal, adult and CC foetal liver, bone marrow, brain, kidney, lung, placenta, prostate, shelter useful diagnostic markers and potential therapeutic acids are clinically useful diagnostic markers and potential therapeutic agents for male infertility and cancer. The present oligonucleotide was used in an certample from the invention
                                                                                                                                                                                                                                                                                                                                                                Query Match

                                                                                                                                                                                                                                                                       Weber syndrome, Kippel-Trenamunay-Weber syndrome, Osler-Reber-rendu CC syndrome, leukaemia, osteoporosis and wound healing. (I) is useful for treating a patient having a condition associated with the level of ERG, by contacting cells of the patient with (I) under conditions suitable for the treatment. The method comprises the use of one or more therapies cunder conditions suitable for the treatment. Leukaemia or tumour conjunction with one or more of other therapies such as radiation or conjunction with one or more of other therapies such as radiation or conjunction with one or more of other therapies such as radiation or conjunction with one or more of other therapies such as radiation or constanting the cell with (I). (I) is useful for cleaving RNA of CC ERG gene, by contacting (I) with RNA, in the presence of a divalent cation such as Mg2+. (I) is useful for diagnosis of conditions and CC diseases related to the expression of ERG, and as diagnostic tool to examine genetic drift and mutations within diseased cells or to detect the presence of ERG RNA in a cell. (I) is useful for specifically CC argeting genes that share homology with ERG gene or ERG fusion genes. ABK17354-ABK27719 represent nucleic acide, including antisense and celsarded PCR primers of the invention
                                                                                                           Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a nucleic acid molecule (I) which down regulates expression of an Ets-related gene (ERG). (I) is useful for treating conditions selected from cancer, lymphoma, Ewing's sarcoma, melanoma, tumour angiogenesis, diabetic retinopathy, macular degeneration, neovascular glaucoma, myopic degeneration, arthritis, psoriasis, verruca yulgaris, angiofibroma of tuberous sclerosis, port-wine stains, Sturge
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ophthalmological; antiarthritic; antipsoriatic; virucide; osteopathic; vulnorary; cancer; lymphoma; Ewing's sarcoma; melanoma; psoriasis; tumour angiogenesis; diabetic retinopathy; macular degeneration; neovascular glaucoma; myopic degeneration; arthritis; verruca vulgaris angiofibroma of tuberous sclerosis; port-wine stain; wound healing; Sturge Weber syndrome; Kippel-Trenaunay-Weber syndrome; leukaemia; ss;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel polynucleotide which down regulates expression of Ets-related geruseful for treating cancer, diabetic retinopathy, macular degeneration, arthritis, psoriasis, verruca vulgaris and Sturge Weber syndrome.
                                                                                                                                                                                                                             Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Claim 4; Page 69; 149pp; English

The HBM-like phenotype results in bone mass modulation and/or lipid level modulation. The invention is useful for diagnosing a HBM-like phenotype in a subject and for preparing a composition for modulating bone mass and/or lipid levels in a subject suffering from e.g. osteoporosis. The present sequence was used to illustrate the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The alpha-2-delta-D gene encodes a calcium channel subunit polypeptide. The gene has been mapped to chromosome 12p13.1. This gene and the related alpha-2-delta-C and -B genes are useful for protecting mammalian cells from abnormal calcium flux by introducing expression vectors containing the respective gene into mammalian cells. The antisense genes are also useful for treating or preventing epilepsy. The alpha-delta-2-A protein is a high-affinity binding target of the anti-convulsant drug gabapentin. Therefore, alpha-delta-2 proteins may also be targeted to treat seizure-related syndromes, migraine, attaxia, vestibular defects, chronic pain, sleep interference, anxiety, amyotropic lateral sclerosis (ALS), multiple sclerosis, mania, tremor, parkinsonism, substance abuse or addiction evadrones, mood. depression or cancer

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention describes a short interfering nucleic acid (sina) control that downregulates expression of a mitogen-activated protein kinase (MAPK) genes by RNA interference. Also described: (1) a method for modulating expression of MAPK genes in cells, tissue explants or cells trissue explants or cells trissue explants or cells translation; and (4) corresponding these vectors that express sina and cells containing these vectors. MAPK sinase cells artiarthritic, anorectic, antidiabetic, antiinflammatory, antiasthmatic, immunosuppressive, antibacterial, antirheumatic, cells, cells and early can be used to modulate the expression of MAPK genes, in cells, cells can be used to modulate the expression of MAPK genes, in cells, cells and II; a wide range of tumours, and inflammatory diseases (asthmatic septic shock, rheumatoid arthritis, psoriasis and inflammatory bowel disease). They can also be used for drug screening; diagnosis; target celested; the control of maphing (e.g. of single-nucleotide control of the present sequence represents a MAPK sina which is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

                                                                                                                                                                                                                                                                                                           Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                          CC The present invention describes a short interfering nucleic acid (siNA)
CC that downregulates expression of a mitogen-activated protein kinase
CC (MAPK) genes by RNA interference. Also described: (1) a method for
modulating expression of MAPK genes in cells, tissue explants or
CC organisms by introduction of siNA; (2) kits for in vitro or in vivo
CC delivery of siNA; (3) conjugates and/or complexes of siNA; and (4)
CC vectors that express siNA and cells containing these vectors. MAPK siNAs
CC have cytostatic, annoractic, antidiabetic, antifilammatory,
antiasthmatic, immunosuppressive, antibacterial, antirheumatic,
CC antiasthmatic, immunosuppressive, antibacterial, antirheumatic,
CC antiarthritic, antipsoriatic and gastrointestinal activities. The MAPK
CC siNAs can be used to modulate the expression of MAPK genes, in cells,
CC tissue explants or organisms, e.g. for treating obesity; diabetes types I
CC tissue explants or organisms, e.g. for treating obesity; diabetes types I
CC disease). They can also be used for drug screening; diagnostis; target
CC disease). They can also be used for drug screening; diagnostis; target
CC disease). They can also be used for drug screening; pharmacogenomics;
constitution and validation, genetic engineering; pharmacogenomics;
constitution and validation, genetic engineering pharmacogenomics;
constitutions. The present sequence represents a MAPK siNA which is used
CC in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                            Query Match

```

The present invention relates to a method for ameliorating the effects of CC skin disorders. The method comprises contacting the skin with an CC antisense oligonucleotide, (for Insulin-like Growth Factor [IGF]-1 CC receptor, IGF binding protein [IGFB9]-2 or IGFB9], which is capable of inhibiting or reducing growth factor mediated cell proliferation, CC inhibiting or reducing growth factor mediated cell proliferation, CC inflammation and/or other disorders. The present sequence is an CC oligonucleotide which can be used to design the antisense CC oligonucleotides of the present invention (see AAF45151 and AAF45153-CF F45161). The method is useful for ameliorating the effects of psoriasis, CC inthyosis, pityriasis, ruba, pilaris, serborrhoea, keloids, keratosis, CC neoplasias, scleroderma, warts, benign growths, cancers of the skin, a CC hyperneovascular condition such as a neovascular condition of the retina, CC brain or skin, growth factor-mediated malignancies, other sclerotic CC disease, kidney disease, hyperproliferation of the inside of blood vessels or any other hyperplasia Sequence 15 BP; 2 A; 3 C; 6 G; 4 T; 0 Ф; 0 Other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to enzymatic and antisense nucleic acid molecules that act as inhibitors of the expression of repressor genes encoding the TR2 Orphan receptor, EAR3/COUP-TF-1, the GAIA transcription factor gene, IRF-2 and/or the CAATT Displacement Protein (CDP). Inhibition of the repressors removes prevents inhibition (and consequently increases expression of) genes involved in the production of erythopoietin, granulocyte colony stimulating factor protein and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 WPI;

                                                        This invention relates to an antisense compound targeted to a nucleic acid molecule encoding a member of the human Rho family of small GTP binding proteins, where the antisense compound inhibits the expression of the member of the human Rho family. The invention includes antisense coligonucleotides AAF94680 - AAF94637 which target a RhoA nucleotide sequence, AAF94725 - AAF94684 which target a RhoB nucleotide sequence, AAF94725 which target a RhoC nucleotide sequence, AAF94727 - AAF94766 which target RhoG nucleotide sequence, AAF94796 - AAF94790 which target a Rac 1 nucleotide sequence and AAF94795 - AAF94790 which target a Rac 1 nucleotide sequence and AAF94795 - AAF94790 which target a RhoC nucleotide sequence, AAF94795 which target cac42 nucleotide sequence. The antisense compound is useful for treating pretryproliferative conditions, especially cancer, abnormal wound healing or clotting conditions and ischaemia/reperfusion or recoxygenation injury. The compound may also be used to diagnose the above conditions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Rho; GTP binding protein; phosphorothicate antisense oligonuclectide; RhoA; RhoB; RhoC; RhoG; Rac 1; cdc42; hyperproliferative condition; cancer; wound healing; clotting; ischaemia; reperfusion; reoxygenation;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             nucleotides in length, and are targeted to the gene encoding human The antisense oligonucleotides may be useful for treating diseases associated with the expression of RhoB, such as breast cancer. They also have research and diagnostic applications

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to production of Acremonium chrysogenum cephalosporin C-acetyl hydrolase (CPC-AH) and its utilisation in the synthesis of deacetylated derivatives of cephalosporin C (CPC) and the inactivation of the gene for increasing production of cephalosporin. Derivatives and/or their synthesis intermediates can be synthesised by growing a microbial host transformed with a DNA sequence that includes the cahB gene encoding A. chrysogenum CPC-AH, under conditions where it is either expressed or inactivated. The genes and proteins are used for removal of acetyl groups, especially from the 3'-carbon of CPC or from 7-aminocephalosporanic acid, to give deacetylated products useful as intermediates for cephalosporin antibiotics. Inactivation of the gene that expresses CPC increases production of cephalosporins by A. chrysogenum. This sequence represents a PCR primer used to clone the cahB gene encoding A. chrysogenum CPC-AH

                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to an oligonucleotide primer capable of specifically hybridising to a DNA having the sequence of the flanking regions of a microsatellite selected from M2-4-9, M2-2-12, M2-3-11, M2-2-20, M2-2-21, M2-2-22, M2-2-23, M2-2-24, M2-4-25, M2-4-26, M2-2-29, M2-2-32, M2-4-32, M2-4-33, M2-4-37, M2-3-22, M2-2-36, M2-5-11, M2-2-46, and M2-2-48. The primer is useful for determining the number of repeat units of the microsatellite cited above. The primer is useful in HLA-related research, such as genetic mapping of HLA class II-associated diseases, transplantation matching, population genetics, and identification of recombination hot spots as well as linkage disequilibrium studies. The present sequence represents the human microsatellite repeat M2_3_4.
                                                                                                        human leukocyte
                                                                          Synthetic
                                                                                                                                    Probe sequence #39 related to the invention.
                                                                                                                                                                04-DEC-2003
                                                                                                                                                                                              ADB78536;

The methods are useful for detecting the presence or absence of target nucleic acid sequences on sample nucleic acid strands that are characteristic of pathogens or gene variations and mutations relating to human leukocyte antigen (HLA) or T-cell receptor gene sequences, e.g. for HLA tissue typing, detecting genetically inherited diseases or detecting infectious organisms in issues. The diagnostic probes are useful for detecting the presence of particular target nucleotide sequences. The present invention provides improved methods of detecting sample/target nucleic acid sequences where number of alleles detected, which increased specificity reduces the number of alleles detected, which increases the resolution of the method, and does so at a lower cost. The present sequence represents a probe of the invention

Novel genetic variants of G-protein coupled receptor studying expression and function of the protein, and to treat diseases e.g. cancer. gene useful in for screening drugs

Claim 16; Page 13; 75pp; English

receptor 31 (GPR31) gene. The invention also relates to compositions and methods for haplotyping and/or genotyping the GPR31 gene in an individual. Polynuclectides of the invention are useful in studying the expression and function of GPR31, and in expressing GPR31 protein for use in screening candidate drugs to treat diseases related to GPR31 activity of and in studying the effect of the variation on the biological activity of GPR31 as well as on the binding affinity of candidate drugs targetting GPR31 as well as on the binding affinity of candidate drugs targetting GPR31 for the treatment of cancer. They are also used in gene therapy. The haplotyping method is useful for improving the efficiency and creliability of several steps in the discovery and development of drugs for treating diseases associated with GPR31 gene in an individual, which can also be used by the pharmaceutical research scientist to validate GPR31 as a candidate target for, and in design of clinical trials of candidate drugs, for treating a specific condition drugs or disease predicted to be associated with GPR31 activity. The present sequence is an allele specific oligonucleotide (ASO) primer used to detect human GPR31 gene polymorphisms The invention relates to genetic variants of human G-protein coupled GPR31) gene. The invention also relates to compositions for use e E

The present sequence is an antisense oligonucleotide specific for the human IIA receptor. The method can be used to treat airway diseases such as cystic fibrosis, asthma, chronic obstructive pulmonary disease, bronchitis and other airway diseases characterised by an inflammatory response. By eliminating adenosine from the antisense ON, its liberation upon antisense degradation is prevented, thereby preventing adenosine-induced bronchoconstriction in patients with hyper
                        The present invention relates to a new method of constructing a mutant DNA library. The method of the invention involves ligating unit domain DNAs in arbitrary combinations, mixing the ligated unit domain and performing polymerase chain reaction (PCR) by employing the ligated unit domain DNA mixture as a template to obtain a DNA library containing 2 or more clones. The method can be used for constructing a mutant DNA library which is for use in producing e.g. protein library, mutant proteins and artificial amino acid sequences with desirable functional properties with a combination of unit domains. The method can also be used for selectively splicing a library to yield mutant proteins with retention of function and smaller for wider application and in evolution molecular engineering in which the constructed mutant DNA library contains various
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Constructing mutant DNA library comprises ligating unit domain DNAs in arbitrary combinations before mixing in specific manner as template for polymerase chain reaction to give clones, useful in producing protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Mutant DNA library; selective splicing;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 27-SEP-2000; 2000JP-00293692.

                     The present invention describes nucleic acid molecules which modulate the synthesis, expression and/or stability of a mRNA encoding 1 or more receptors of vascular endothelial growth factor (VEGF). A patient (preferably human) having a condition associated with the level of the fins-like tyrosine kinase 1 (flt-1), kinase insert domain containing receptor (KDR) and/or foetal liver kinase 1 (flk-1) (e.g. tumour angiogenesis, ocular diseases, psoriasis and rheumatoid arthritis) can be treated by administering the nucleic acid molecule or the expression vector to the patient. AAX67275 to AAX75752 represent specific examples of nucleic acid molecules from the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           regulating domains in structural DNAs. The method is easy and less error prone in DNA shuffling when constructing DNAs. The present nucleic acid sequence represent one of a collection (ABK67951-ABK68000) of PCR primer; that were used in the methods of the invention for construction of a
                                                                                                                                                                                                                Nucleic acid molecule modulating VEGF receptor(s) gene expensibility - useful for treating e.g. tumour angiogenesis, rheumatoid arthritis, etc., in a human patient.
                                                                                                                                                                                                                                                                                                                                                                              26-OCT-1995;

A method has been developed for the identification of a nucleic acid capable of modulating a process in a biological system. The method comprises: (a) introducing into the system a random library of nucleic acid catalysts (NAC) having a substrate binding domain (SBD), comprising a random sequence, and a catalytic domain (CD); and (b) identifying NAC in systems where modulation has occurred and/or determining the sequence of at least part of the SBDs in such systems. Nucleic acid molecules with endounclease activity and catalytic activity; from the present invention, are used to modulate gene expression in plant and mammalian cells and to cleave target nucleic acid, particularly for treating systemic diseases caused by specific RNA, e.g. cancer, inflammation, psoriasis, non-hepatic ascides and infection. They may also be used to detect genetic drift and mutations in diseased cells and to determine c-raf RNA. Specifically NACs with RNA-cleaving activity that modulate expression of the Raf gene, are used to treat cancer, restensels, soriasis or rheumatoid arthritis, or generally any condition associated with the level of c-raf. Introduction of sugar/phosphate modifications increases stability against nuclease and activity. ANY9922 to ANY9387 represent NACs that can be used in the method, specifically for modulating the expression of a Raf gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Homo sapiens
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Identifying new catalytic nucleic acid especially ribozymes that cleave Raf restenosis, and also new ribozymes and used as antiviral agents and synthons.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               09-JUN-1997;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human; ss; antisense therapy; cytostatic; antiinflammatory; haemostatic; cerebroprotective; nootropic; neuroprotective; antiparkinsonian; muscular; CD20; neurite growth inhibitor gene; NOGO; hammerhead ribozyme; DNAzyme; inozyme; G-cleaver; amberzyme; zinzyme; lymphoma; leukaemia; B-cell lymphoma; non-Hodgkin's lymphoma; NHL; lymphocytic leukaemia; human immunodeficiency virus; HIV associated NHL; mantle-cell lymphoma; NMCL; inmunocytoma; IMC; immune thrombocytopaenia; stroke; dementia; inflammatory arthropathy; central nervous system injury; cerebrovascular accident; CVA; Alzheimer's disease; multiple sclerosis; chemotherapy-induced neuropathy; amyotrophic lateral sclerosis; ALS; parkinson's disease; ataxia; Huntington's disease; monitoriar accidents; creative disease
The invention relates to a nucleic acid molecule which down regulates expression of a CD20 gene and a nucleic acid molecule which down regulates expression of a neurite growth inhibitor gene (NOGO). The nucleic acids may be enzymatic nucleic acids (e.g. a riboxyme or a DNAzyme) an Inozyme (an endolytic nucleic acid cleaving an RNA molecule possessing an NCH motif), a G-cleaver (cleaving RNA with a NYN motif) presence of a divalent cation that is preferably Mg^2+.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 17
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Synthetic.
